WHERE WE WIN

- 1. **Sovereignty.** Deploy in your DMZ, VPC, or air-gap. No competitor can match this.
- 2. **TCO.** Per-seat Bolt + flat Aeira tier; **zero inference markup** — you pay the LLM vendor directly at wholesale.
- 3. **Auditability.** Your auditor verifies our logs without touching our infrastructure.

WHERE WE TIE

- 1. **Coverage.** 103 in-house + ~350 via the Airbyte bridge.
- 2. **Agentic surface.** Cross-source action verbs via MCP.
- 3. **4-axis ACL.** Patent-pending; nobody else indexes on these dimensions.

WHERE THEY WIN (TODAY)

- 1. **Web UX polish.** Glean is smoother in browser. We're 3–6 months behind.
- 2. **Brand recognition.** Glean / Hebbia / Harvey are known names.
- 3. **Customer references.** They have anchor logos; ours are pilot-stage.

[†] Bolt is **self-hosted across all tiers** (Authorize · Backbone · Certify), customer-hosted inside your own perimeter. Sparcle operates no cloud that receives your data, and no Sparcle component sits in the data path. There is no managed-hosting tier.
